ENG.exebfdcmQ: How to access Caliburn.Micro ViewLocator from

ViewModel? I have the following issue: I have a application with main
window displaying various views. I would like to access ViewLocator from
my ViewModel. I do have a custom IViewLocator class (Caliburn's

IViewLocator: here) and I want to be able to pass it to my ViewModel for

MainViewModel.CurrentView to allow it to access view's resources

(content, templates, etc.). The following code I found in a ReactiveUI

example, however, produces an error: Cross-thread operation not valid:

Control 'MainViewModel' accessed from a thread other than the thread it
was created on. MainViewModel code: public class MainViewModel :

ReactiveObject, IViewAware, IViewLocator { public

MainViewModel(IViewLocator viewLocator) { Message =

viewLocator.ViewLocator.GetViewFor() } } (Although, in fact, I need the

IViewLocator to be typecasted to a type that I can pass to ViewModel, e.g.

an IViewLocator, as the code above is displaying, so I only need to pass

the type to ViewLocator from which MainViewModel will be able to get the
default property for typecasting.) The code above that's causing the error

is the following line: Message = viewLocator.ViewLocator.GetViewFor()

ViewLocator: 6d1f23a050
